## **CANOR TP105 VR amplifier User Guide**

Dear lover of music,

thank you, that you have purchased our CANOR TP105 VR amplifier. To preserve and maintain the best characteristics of your amplifier, we recommend you carefully read the following lines.

### **Safety instructions**

Please, read before placing the device in action.

1. Read the instructions - all safety information and instructions should be read before using the amplifier.
2. Keep instructions - security and user instructions should be stored for possible later use.
3. Follow the instructions - all the security and user instructions should be followed.
4. Water and moisture - amplifier should not be placed near water, for example near the baths, swimming pool, kitchen sink, etc..
5. Accessories - do not use accessories not recommended by the manufacturer.
6. Location - do not put a device on the fragile backing. The device may fall, which can cause serious injuries to children or adults, as well as damage to the device. Use only backings or stands recommended by the manufacturer or sold to dealers at the same time with this device. Any location of the device should be in accordance with the manufacturer's instructions and only accessories recommended by the manufacturer should be used.
7. Wall mounting - the device should be mounted on the wall only if the manufacturer recommends.
8. Ventilation - equipment should be placed so that it guarantees it a good airflow. This means that it must not lie on the sofa or upholstered furniture, in the working condition it must not be covered. It would then prevent proper air flow around the vent holes of device.
9. Heat – the device must be located so as to avoid the heating from heat sources, for example heaters or stoves or other heat-producing equipment. The distance from the rear wall of the device may not be less than 20 cm, and 30 cm above the area of the amplifier may also be no obstacle.
10. Power source - the device must be connected only to a power supply, for which it is proposed.

11. Power cord - it is necessary to pay particular attention to a power cord, it must be positioned so as to avoid stepping on it and to ensure it is protected against mechanical damage.
12. The longer the period during which you do not use the amplifier – you should disconnect the power cord from the mains supply, or at least turn off the main power switch located on the rear panel.
13. Subjects containing liquid - do not place these objects (vases, flower pots), so that they can fall on the amplifier, possibly a fluid could leak out of them on the amplifier.
14. Damage requiring service - equipment should be repaired only to qualified service once:
  - a) power cord is damaged
  - b) the device fell into the water or was poured
  - c) the device was exposed to rain
  - d) the device works incorrectly
  - e) the device fell to the ground or is otherwise mechanically damaged.
15. Repairs - all repairs must be entrusted to qualified service.
16. General warning - use the device only in accordance with the instructions.

**Caution! To help you avoid an electric shock, do not expose the amplifier to rain or moisture**

## **Connecting the speakers and signal cables**

Input connectors are located at the rear of the amplifier and correspond to the position of the selector switch on the front of the unit.

All inputs use RCA connectors and are connected by the usual rules, thus right channel- RED, left channel-WHITE. On the output RCA connectors labeled TAPE OUT, you can connect the recording equipment, for instance tape recorder, MiniDisc, etc.

The CANOR TP105 VR does not have input suitable for turntable pickup, it is necessary to use a separate phono preamplifier, for example CANOR TP 305, which is then connected between the turntable and a free line level input of the amplifier. For further information contact your dealer please.

Speaker outputs are made up of two triplets of gold-plated speaker terminals labeled + and –

For the ideal adaptation of the output to the speaker system, the amplifier is equipped both with 4- Ohm and 8-Ohm output. If you have speakers of the nominal impedance of 6 ohms, connect the speakers to 4-Ohm terminals. These connectors are located at the rear of the amplifier.

Ensure that the polarity is observed and matches the speakers.

**Caution! Make all connections only if the device is disconnected from the mains**

## **Switching on**

If you have already connected all signal sources and speakers, connect the amplifier to the mains. Please ensure the position of the volume control is fully counterclockwise (zero volume).

Turn the amplifier on with power switch located at the front of the unit.

Operate the input source and increase the volume control in a clockwise direction until an audio signal is observed and you hear the sound from the speakers.

**Always turn the power switch in a clockwise direction! (when switching on also when switching off).**

If for any reason no output is observed, please refer to the trouble-shooting guide.

## Trouble-shooting guide

The amplifier is completely broken: power cord is not properly connected to the mains.

**Solution:** connect the cable properly

No input signal to one or both channels.

**Solution:** select correct signal source using the input buttons

Verify that the input signal cables are properly connected.

Verify that the output signal cables are properly connected to the speakers.

Lack of bass output, impossible stereo location .

**Solution:** Check polarity of speaker connection

**Caution! Inside your CANOR TP105 VR amplifier there are no parts or adjusting features that user can set or correct**

## Service

Should you encounter a problem which you are not able to alleviate or identify despite above information, please contact your dealer for further advice. Only when the problem cannot be resolved should the unit be sent to the responsible distributor in your country.

## European Community Directives

This product is designed and manufactured in order to comply with existing laws of the European Community. This product is certified by testing laboratory and bears the CE mark.

Revision May 2009

## Specification

Output power	2x 40W/4 and 8 Ohm
Input sensitivity	350 mV/40 W
Frequency range	20 - 20 000 Hz + -0.1dB/5W
Input impedance	100 kOhm
Harmonic distortion	0,1 % /1 kHz, 5 W /
Signal to Noise ratio	>90 dB
Tubes	12AT7-4pcs,EL34-4pcs, PY88-4 pcs
Power	230 V/50 Hz
Dimensions (wxhxd )	435 x 160 x 350 mm
Weight	19 kg
